PROFILE
I'm a Full-Stack Developer with a passion for getting every little thing right. After earning a degree in Biology and applying for jobs I realized they mostly lacked what I was most interested in- problem solving, creativity, and technology. I went back to school for Web Development and I'm ready to hit the ground running with a career that challenges me and pushes me to learn new skills.

EDUCATION
DevPoint Labs (University of Utah) — Full-Stack Web Development Program Winter 2022
Colorado State University — Bachelor of Science in Biological Science with minors in Sustainability & Spanish 2014-2018

EXPERIENCE
Pharmacy Technician, MedSync Pharmacy; Boise, ID — 2021-2022
I worked closely with pharmacists to distribute medication and maintained accurate patient records. Using Liberty Software, I communicated with both medical professionals and insurance companies to solve problems in a fast-paced environment.

Web Designer & Lab Assistant, Kanatous Extreme Physiology Lab; Fort Collins, CO —2019
Originally hired as a lab assistant, I performed various duties relating to master's candidate research before pitching my skills as a web designer. I saw a weak point for the lab and took it upon myself to create a new website, education videos, and promotional videos on display throughout the university.

Web Designer & Marketing Specialist, Tongass Wholesale, LLC; Remote — 2018-2019
I maintained a number of roles with Tongass Wholesale, LLC including sustainable product design, packaging, social media management, and web design. The product was Viking Firelogs- a carbon neutral firelog made from sawdust shavings in lumber mills.

Web Designer, McHaul Enterprises; McCall, ID — 2018
Designed and created website for McHaul Enterprises, a local transportation company.
